

About us

A hackerspace is a place where people with similar interests in technology, science, art, culture, and making meet. Activities are not in the slightest restricted to only computer science, but also emerge from electronics, contemporary art, photography, and any and all other pursuits worth sharing. The hackerspace offers a turnkey infrastructure to its members where innovative projects that would not come to life in a garage, can find nourishment and support.

The hackerspace's 3D Printer (MakerBot)
